The Quadrato Lab (<http://quadratolab.usc.edu>) is seeking a highly motivated postdoctoral fellow who is excited about researching the cellular and molecular basis of human brain development and disease. By combining emerging models of the human brain with single cell omics approaches, we are aiming to identify cell type specific disease mechanisms and above all, new treatments for human neurodevelopmental disorders. We are deeply committed to effective training, mentoring and career development of the next generation of neural stem cell biologists. The successful candidate will have a Ph.D degree in a relevant field, and preference will be given to candidates with strong background in neurobiology and/or neural stem cell biology. Expertise in molecular biology, culture of human pluripotent stem cell and/or bioinformatics is an advantage. Please email your application including a brief cover letter stating your research interest and career goal for the next five years, a detailed CV, and contact details of 3 referees to quadrato@usc.edu.
